

Innovative metal solutions for the aerospace industry

SHAPING A BETTER
FUTURE

www.aries-alliance.com

Mission

ARIES ALLIANCE develops and delivers in the best conditions full solutions (machines, tools, simulation software, turnkey workshops, part production) in aircraft metal forming and for large scale machining.

We strive for innovation in order to increase our customers' added value and work in partnership with them to ensure a long lasting relationship.

Our global strategy

ARIES ALLIANCE is a multi-level alliance of companies, technologies and products, and is widely recognized as the world leader in its range of expertise.

Our extensive experience in the field of metallic transformation processes enabled us to master the aerospace part manufacturing process through the implementation of the same skills chain that allowed us to stand out in the machine manufacturing domain: simulation, design and manufacturing. Our global strategy relies on these complementary activities, they are our foundations and make our group a unique entity in the industry.

Technology & innovation

Because innovation is core at ARIES ALLIANCE, we continue to develop innovative shaping solutions through tight collaborations with our customers and external research institutes.

We aim at being a driving force in the technological advancement of the metal forming industry by continuously improving our products and services. To do so, ARIES ALLIANCE re-invests more than 10% of its yearly revenue back into Research & Development

METAL SHAPING MACHINE FABRICATION

Headquartered in France, ACB has a long experience in the field of metal forming through which it has acquired invaluable know-how.

ACB clients include worldwide companies involved in the field of aeronautical structures, engines and aircrafts manufacturing. The company offers a complete package of products and services to its customers:

- Process Simulation, construction and installation of machines for titanium forming (sheet stretch forming, profile stretch forming, elastoforming, hot forming, superplastic forming, linear friction welding) and turnkey workshops
- A full and global customer support

Based in North Carolina, Cyril Bath is the world leader in custom stretch forming presses for both commercial and military aerospace applications.

The company continues to develop innovative forming technologies through active research and development programs. These investments lead to valuable aluminum and titanium forming solutions for its world-wide customers

Located in France, Dufieux manufactures large 5-axis milling machines.

Innovations and the integration of the latest technological advances enable DUFIEUX to provide its customers cutting-edge solutions for aluminum, titanium, and composite applications for the aerospace industry. With numerous worldwide installations, DUFIEUX has established itself as a proven partner for its customers.

Using its Grenoble facilities, DUFIEUX, through the Aries Manufacturing branch, also specializes in the manufacturing of fuselage panels to assist clients meet their production targets.

AEROSPACE PART PRODUCTION

Based in France and USA to address the global market, ARIES MANUFACTURING includes the aerospace part production units based on the technologies developed within the group.

The entity is dedicated to the manufacturing of complex parts, in titanium, aluminum and Inconel, for leading players in the aeronautical industry.

For all cold forming, hot forming, friction welding processes and machining of pocketing panels, ARIES MANUFACTURING provides industrial solutions with high standards of OTD and top consistent quality .
